**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to a pelvic prosthesis, classified in class 623, subclass 22.12.
  - II. Claims 17-25, drawn to a trial component, classified in class 606, subclass 98.
  - III. Claims 26-28, drawn to a method for implanting a pelvic prosthesis, classified in class 623, subclass 22.37.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a trial component for implanting a knee prosthesis or a wrist prosthesis. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
4. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product. For example, in step (i), instead of “filling cement between the ilium and the prosthesis”, the step of fixing/attaching the prosthesis could be performed without using cement. The prosthesis could be securely attached/fixed with screws.
